

The reference 3

Title of the Invention: A plate for connecting bones

Field of the Invention:

The invention relates to a plate used for connecting broken bones.

Brief Description of the Invention.

A plate 1 has a reinforcing base member 2 to be secured along the broken bones A and B. An artificial bone (not shown) is disposed between the human bones A and B. The numeral 10 denotes an aperture that enables the plate 1 to be fixed to the artificial bone. The aperture 10 also allows the reduction in weight of the plate 1..
